V0.1 - 14 Sep 2020 WIP

1 Land Owner not liable for Land Tax

2 New Land Tax Registration

Trust Registrations and Liability Deductions

- Clark and Lois have a son, Jimmy, and decide to purchase Property C under their SMSF Trust, which is managed by AON as the Trustee.
- Clark, Lois and Jimmy are all beneficiaries of the trust.
- The Trust is the Land Owner of Property C. No exemptions apply and the 25K tax free threshold for trusts is exceeded therefore the Trust is registered for Land Tax.
- The Trustee receives the Assessment notice on the behalf of the Trust.
- Clark is a Land Owner of Property A, B and C.
- Property B is PPR exempt but 10% of Property A and 25% of Property C is included in his aggregated site value.
- Clark receives a liability deduction for his portion of the Trust's liability for Property C.
- Lois is Land Owner of Property B and C. Property B is exempt due to PPR but Lois is assessed for 25% of Property C.
- Being under the tax free threshold, no Land Tax Registration is created.
- Jimmy is a Land Owner of Property C. He is assessed for 50% of Property C. Being \$500K and above the tax free threshold, a Land Tax Registration is created.
- Jimmy receives a liability deduction for his portion of the Trust's liability for Property C.

Property Valuations and Ownerships
Key Data and Relationships

Property to Parcel Relationships

Version Control
V0.1 - 24 Aug 2020

Initial draft for discussion

One Property to One Parcel

Typical Scenario

Single detached house on one title

Many Properties to One Parcel

Typical Scenarios

Multiple occupancies on one title such as:

- Main house and granny flat
- Shop front with a residence
- Retirement village on single title

One Property to Many Parcels

Typical Scenarios

Single residence on multiple titles, such as:

- A farm that covers multiple parcels/titles
- A residence with contiguous land used for gardens

Many Properties to Many Parcels

Typical Scenario

Shopping centre on multiple titles

Definitions

- A property is defined as land under common occupation particularly for the purpose of rating, billing or habitation.
- Properties are typically described by street address or a "rate assessment number" allocated by an authority, eg local government or utility.
- At SRO, this number is the MPN (Municipal Property Number). This is typically the Council's Assessment Number, however a handful of Councils provide the Council Property Number.

Key Concept – Valuations

- Valuation of properties is subject to the Valuation of Land Act 1960 and underpins the Property and Parcel relationships.
- In summary, Section 13DC requires that:
 - Each separate occupancy on rateable land must be individually valued and allocated an AVPCC code (e.g. 110 – Detached home). This results in the Many Properties to One Parcel relationship.
 - 2) Multiple parcels of land that are occupied by the same person, are contiguous and within the same municipality are to be regarded as the one property and valued accordingly. This results in the One Property to Many Parcels relationship.
- Note: the assessment of valuations at Occupancy level is also under Section 21 of the Land Tax Act 2005.

Key Concept – Council Property vs SRO Property

- Being at Occupancy level per legislation, the majority of Council properties match one-to-one to SRO properties for valuation purposes.
- However, some discrepancies do exist due to:
 - Council rates are based on Financial Year under the Local Government Act 1989 vs Land Tax which is based on calendar year under the Land Tax Act 2005.
 - The different Acts also cover timing as to when (and if) Supplementary Valuations are to apply.
 - Essentially, the timing mismatch results in differences due to subdivisions, consolidations or other key property changes in the interim.

Related Properties

Version Control
V0.1 - 24 Aug 2020 Initial draft for discussion

Subdivision - One to Many

Typical Scenario

Single property on title is subdivided into 2 units on separate titles.

Subdivision - Many to Many

Typical Scenario

Properties on separate titles are developed into an apartment complex with multiple units on separate titles.

Subdivision - Many to Many

Typical Scenario

XXX

Consolidation – Many to One

Typical Scenario

Properties on separate titles are re-developed into single property on the same title.
